### **Mr. Thomas M. Walker – Certified as LEED Accredited Professional**

Cleveland, OH – August 05, 2009 -- KEOGH Consulting, a Professional Supply Chain Logistics Consulting firm, is pleased to announce that Mr. Thomas M. Walker has achieved accreditation from the United States Green Building Council (USGBC) as a Leadership in Energy and Environmental Design Accredited Professional (LEED AP) for New Construction and Major Renovation Projects.

Mr. Walker holds a dual Bachelor of Arts degree in Business Administration and Economics from Maryville College in Maryville, TN. He has been involved in system design, project management, building construction, installation, start-up and training for over 25 years and serves as Project Manager for KEOGH Consulting. He is well founded in various Material Handling equipment applications and has considerable knowledge in state-of-the-practice application and design, as well as their impacts and the necessary operational and financial considerations for practical application.

In order to obtain his accreditation, Mr. Walker completed an extensive course of study and passed an exam in which he demonstrated a thorough understanding of green building practices and principles, familiarity with LEED requirements, resources, processes, and the LEED Green Building Rating System, the nationally accepted benchmark for the design, construction, and operation of high-performance green buildings.

LEED Professional Accreditation distinguishes building professionals with the knowledge and skills to steward the LEED certification process and promote sustainable building practices. The use of LEED certified professionals in a construction project earns the project owners credit toward achieving LEED certification for the building. As a LEED accredited professional, Mr. Walker can provide valuable insight into how sustainable building strategies and the LEED certification process in particular can be effectively integrated into the design and construction process.
